

Class Activity 1 – Basic HTML tags

Description: complete the following webpage using some basic HTML elements

Basic HTML by: Student's Name

ET 710 – Web Technology: Building and Maintaining Web Sites

Course Description

This course focuses on frontend, browser-based user experience. Students will create websites using current web design patterns and publish them to the public internet. Topics include: building a webpage with **HTML**, **CSS**, Java Script, industry standard web frameworks, responsive web design, data input forms, source and revision control.

General Information

Attendance
1-19 minutes is considered ONE LATE, THREE lateness is equal to ONE ABSENCE, and ~~THREE~~ absences result in a "WF" or "F" as the lab grade. More than 20 minutes late counts as an absence.

Lecture Conduct
No eating, drinking, smoking, radio playing, cell-phones, and use of inappropriate words in the classroom. Student should clean up the work bench before leaving the classroom at the end of the session; a dirty bench gets points off for the each exam grade.

Training Qualifications

- Build and test code using text editor, and translate design instruction into code.
- Translate design direction into a responsive implementation using different web development techniques such as HTML, CSS, HTML5, and bootstrap.
- Collect and use existing routines or procedures and integrate them into their code.

Webpage should title as:
Basic HTML by Student's full name

Course title using heading 1

Horizontal Line

Two breaks

Definition list
